Introduction

Owning a high definition television set, as well as a high definition receiver, you can pick up HDTV signals for free with an HDTV antenna. If you live in a urban area or large community, you will probably be able to pick up the following HDTV channels with the help of a HDTV antenna; all network TV stations including CBS, FOX, ABC, NBC and a whole lots more. Also, depending on the area you are from, there may be a few other HDTV Stations that are accessible for free and can be effortlessly picked up with an HDTV antenna.

An HDTV antenna is a standard TV antenna, and it is significant to note that with an HDTV antenna, you will also be able to select normal UHF and VHF channels, as well as FM signals. With advancement in technology, many of the latest TV antennas have sophisticated features such as signal amplifiers, antenna rotators and antenna cabling.

It is important to note that to get great HDTV reception you should have an antenna that can lock in the highest gain. Other aspects that are tremendously important are the channel that you would like to watch, where the station is transmitted from and where your location is.

Most HDTV antennas work greatest by being in the line of sight of HDTV signals being

transmitted. For instance, if you live in the valley, your reception may suffer, if you are on the top of the hill, high up or live in an apartment building near the top, you will probably have better reception that a lower level antennas.

HDTV antennas come in various models such as indoor, outdoor and roof installed. While most antennas are affordable, roof antennas are usually the most expensive, due to their size, installation gear that is necessary to secure them and possible installation costs. Most roof antennas will fit easily on either a flat or pitched roof, however you might need specific fastening equipment depending on the roof type.

An accessory that is normally used with roof HDTV antennas are antenna rotators. These devices are small motors that can rotate the roof antenna to find the best position for receiving specific HDTV channel broadcasts. Usually the HDTV rotator is controlled with an electric motor that is manually controlled from inside the home. Some HDTV antenna rotators are extremely convenient and can be controlled via remote control.

thinking about:**

New HD Antenna

Full 360 Degree Motor Rotation

This HDTV Outdoor Antenna comes with a built-in rotor (motor), which can turn a full 360 degrees using the infrared remote control included with the package. This is the perfect solution for any rural or suburban areas. Since the HDTV Outdoor Antenna can be aimed in any particular direction, you will be able to pick up TV signals much better than with a regular fixed or rabbit ears antenna. This unit is easy to install. Only a 3/4" diameter mounting pole (pole not included) is needed to install your new HDTV Outdoor Antenna. Customers who have purchased this unit have been very pleased with the results. Many customers order multiple HDTV Outdoor Antennas again and again for their family and friends, since the reception is so great.
